

Subject: REACH-(Registration, Evaluation and Authorisation of Chemical substances).

As a consequence of legislation (EU) n°1907/2006 (REACH) all producers, importers or distributors and in some cases users of chemical substances have to deal with REACH.

It concerns chemical substances, mixtures of chemical substances (preparations) and substances in articles.

The main goal of REACH is to make sure that all the companies in the supply chain can be sure that all chemical substances are safely produced, placed on the market or used. The responsibility therefore lies with the companies.

Krekelberg Flock Products (KFP) is a downstream user as a producer of articles. KFP has made an inventory of all chemicals which we use to produce flocked products.

KFP has contact with all our suppliers of chemical substances to, there were necessary, make an identified use of these chemical substances.

Our suppliers will make a pre-registration off all by KFP used chemical substances.

Therefore, KFP has taken the necessary steps and is well prepared for Reach so we will be able to produce your demands in flocked products like always.
